RELEVANT COURSEWORK

- Design and Analysis of Algorithms
- OOPS Concept
- DBMS
- Fullstack Engineering
- Web3 and Blockchain

EDUCATION

• Federal University Oye Ekiti

Mechatronics Engineering

September 2018 - July 2024

Second-class

PROJECTS

• Project 1 : BudAI (SOLANA)

Designed an **Crypto Trading Bot** which provides user an feature of auto trading, copy trading trader's address, and alot of feature in t

- **Tools & Technologies Used:** Node.js | JavaScript | MongoDB | Visual Studio
- Executed algorithms to **make copy trades of user's whom address we added as copy address** via which they can copy the tokens user trading, **with own specific buying and selling amount..**
- User can have access of it's own wallet **and can check his funds or also can withdraw** to his account or where he likes to.
- Algorithm to **auto trade for user's with specific modes**, where user can enjoy aut trading experience with de-gen/safe mode, **which let's user trade over safe side and play with market volatility ..**
- Control of trades **has been designed this way that user can set SL/TP/Slippage/TX priority fees**, and many other things, **which let's user to enjoy the fastest trade on solana ..**
- Deployed the system on Toystack. [🔗 Link](#)

• Project 2 : Aabhushanify

Developed a **ecommerce application with proper MERN STACK**

- **Technologies & Methodologies Applied :** MERN STACK | Visual Studio | AWS
- Its an **contact to buy based** ecommerce website aligning the needs of the client.
- Established **proper admin panel to handle the contents over website like banners/products/other contect etc.** [🔗 Link](#)

• Project 3 : Multi-User Blog Application (Medium Clone)

Developing a **multi user blog application** provides users functionalities and **to do CRUD over blogs** on application.

- **Systems & Tools Implemented :** MERN | OOPs | Docker | Visual Studio | Google OAuth
- Implemented **user authentication** with proper user profile includes and also having google Oauth.
- Enabling user **to manage blogs** and do alot of stuffs like medium [🔗 Link](#)

TECHNICAL SKILLS and INTERESTS

Languages: Typescript, JavaScript, RUST, Python, React

Expertise Area : Object-Oriented Programming(OOPs), Web3 and Blockchain (TON/SOL/BSC/ETH), Webscraping and automation tools.

Tools/Technologies : VS Code, Git, GitHub

Stack and Database : MERN, Next.js, Nuxtjs (Backend), Mongodb, postgres.

Area of Interest : Blockchain and Bot Development, Backend Development

Deployment and Cloud : Vercel, Aws and Toystack.

Interpersonal Skills: Active Listening, Team Work, Communication
